# Instant Rebates! National Grid Downstate New York Point-of-Sale Commercial Foodservice Trial

## Overview

National Grid partners with foodservice equipment dealers to offer Instant Rebates of up to \$1,000 per unit at the point-of-sale to eligible customers on qualified high-efficiency foodservice equipment. Eligible National Grid customers that purchase qualified high-efficiency foodservice equipment may be eligible for discounts at the register through this Trial. The goal is to provide the following benefits to National Grid customers:

### Lower upfront and long-term costs:

Customers receive immediate cost savings at the register on high-efficiency equipment and, through purchase of such equipment, savings on fuel costs over the life of the product. For example, installing a qualified gas fryer can save approximately \$500<sup>1</sup> a year in utility bills over a standard efficiency option.

### Less paperwork for rebates:

Customers no longer deal with the hassle of filing tedious paper applications for rebates. Instead, after providing their natural gas account number, the customer and sales representative can complete the rebate process in approximately two minutes at the point-of-sale.

### More high efficiency equipment offerings in stock:

Instant Rebates encourages equipment dealers to stock more high efficiency equipment and helps ensure that this equipment is available immediately for emergency replacement situations.

For more information on Instant Rebates for high-efficiency foodservice equipment, contact the following foodservice equipment dealers currently offering the Instant Rebates:
